

ESİN ÖZKILIÇ

Msc. Architect

ABOUT ME

I am a Turkish architect who loves travelling , meeting with new people and discovering other cultures. As a student and as an architect I have been international and multicultural teams and working environments several time. I m a hardworking person who can also deal work with different environments and I can easily learn different working methods , softwares and systems as well.

Besides my personal interest and abilities , as an architect , I am more into simplicity and sustainability on architectural design. Precisely , I am interested on how to deal with social issues within urban and architectural design approaches , use and design of public and collective spaces, adaptive reuse and renovation of space , urban rehabilitation.
